

Life Cycles

A butterfly's life has four stages.

1 egg

First, a butterfly lays some eggs.

2 caterpillar

Next, a caterpillar hatches from an egg.

3 chrysalis

Then, the caterpillar spins a chrysalis.

4 butterfly

Last, the butterfly climbs from the chrysalis. The cycle begins again.

A sunflower's life has stages, too.

1 seed

First, a seed falls to the ground and sprouts.

2 plant

Next, the seed grows into a plant.

3 bud

Then, a flower bud grows on the plant.

4 blossom

Last, the sunflower blooms. The cycle begins again.
