Description of Investigation and Student Report
Be an Investigator

Color a map of the United States with the least number of colors you can use so that none of the borders of a state have the same color on each side of the border. Before you do this, make a prediction about the number of colors it will take. Then do it. See how the actual number of colors you use compares to your prediction.
Be an Investigator

Student Report

This is how I colored in the map of the United States so that none of the borders of a state have the same color on each side of the border.

I used _____ different colors.
