

Problem-Solving Strategy:

Make a Table

Problem The Sport Zone sells packages that contain 2 golf balls and 5 golf tees. George bought enough packages to have 30 golf tees. How many golf balls did he get?

UNDERSTAND

1. What do you want to know?

PLAN

2. How many columns should your table have?
What should their labels be?

SOLVE

3. Make your table. What is the solution to the problem?

LOOK BACK

4. How many packages did George buy? How can you use this fact to check that your answer is reasonable?
