

Multiply With 2 and 5

TAKS Objectives 1, 2
TEKS 3.4A, 3.6A

Use the table to solve each problem.

Party Favors Package	
Party Favor	Number in Each Package
Beach Balls	2
Balloons	9
Trading Cards	6
Stickers	8
Kazoos	5
Tattoos	7
Noise Makers	3
Bubble Makers	4

- Tanya buys two packages of balloons for her birthday party. How many balloons does she buy in all?

- Vince used five packages of kazoos to make party favor bags for his party. He put one kazoo in each bag and gave one bag to each guest. How many guests came to Vince's party?

- Felicia buys five packages of a party favor. She now has 10 of those items in all. Which party favor did Felicia buy?

- Larry says that one package of balloons has twice as many party favors as one package of bubble makers. What's wrong?

- A package of tattoos costs \$3. A package of stickers costs \$4. Steve buys two packages of each. How much money does he spend in all?

- Lucy bought 5 packages of trading cards and 2 packages of stickers. There are 15 guests coming to her party. How many trading cards can she give to each guest? How many stickers? Will any of either favor be left over? Explain.
