Story Teller

Solve. Then write a story problem for each equation.

1. $7 + \square = 15$

2. $\square + 8 = 17$

3. $13 - \square = 6$
Story Teller

Solve. Then write a story problem for each equation. Story problems will vary; sample problems given.

1. \( 7 + 8 = 15 \)
   Seven puppies were at the park. Some more came later to play. Then there were 15 puppies in all. How many puppies came later?

2. \( 9 + 8 = 17 \)
   Some cars were in a parking lot. Eight more cars drove in. There are 17 cars in the parking lot altogether. How many cars were in the lot at first?

3. \( 13 - 7 = 6 \)
   Mom put 13 cookies on a plate. My friends and I ate some of them. There were 6 cookies left. How many did we eat?
