

Name _____ Date _____

Description of Investigation and Student Report
Be an Investigator

Think of an item that you would find in the trash that your class could collect. It should be something that is very easy to obtain. For example, you might collect bottle caps. Keep track of how many bottle caps each member of the class brings in for a week or two. Add the number of bottle caps that each person collected and calculate the average number of bottle caps collected by a person in your class.

Information

_____ Collected by Each Person

Average Number of _____ Collected:
