**Description of Investigation and Student Report**  
**Be an Investigator**

Color a map of the United States with the least number of colors you can use so that none of the borders of a state have the same color on each side of the border. Before you do this, make a prediction about the number of colors it will take. Then do it. See how the actual number of colors you use compares to your prediction.

Name \_\_\_\_\_ Date \_\_\_\_\_

**Be an Investigator**  
**Student Report**

This is how I colored in the map of the United States so that none of the borders of a state have the same color on each side of the border.

I used \_\_\_\_\_ different colors.
