

Line and Double Line Graphs

Use the graph for Problems 1–5.

The double line graph shows the high and low temperatures for five days in a row.

1. What were the approximate high and low temperatures on Day 2?

2. Between which two days did the low temperature change the least?

3. Between which two days did the high temperature change the most?

4. On which day was the difference between the high and low temperature the greatest? the least?

5. How can you tell on which day the difference between the high and low temperatures were either the greatest or the least without subtracting the temperatures?

 **Test Prep**

6. During which two days was the increase in temperature the same for the high and the low?

- A** Day 1–2 **C** Day 3–4
B Day 2–3 **D** Day 4–5

7. How much lower are the high and low temperatures on Day 5 than the high and low temperatures on Day 1? Explain.
