Practice Dividing by 6

CA Standards
KEY NS 2.3, MR 2.4

Example

$$30 \div 6 = \blacksquare$$

On a number line, skip count by 6 forward from 0 to 30.

Now, count how many times you skipped forward.

You skipped forward 5 times, so $6 \times 5 = 30$.

Solution: Using this fact, you know that $30 \div 6 = 5$.

Divide.

1. $6 \overline{)60}$

2. $6 \overline{)36}$

3. $6 \overline{)18}$

4. $6 \overline{)54}$

5. $6 \overline{)12}$

6. $6 \overline{)24}$

7. $6 \overline{)48}$

8. $6 \overline{)30}$

9. $6 \overline{)6}$

10. $6 \overline{)42}$

11. $54 \div 6 =$

12. $0 \div 6 =$

13. $36 \div 6 =$

14. $24 \div 6 =$

Writing Math Gwyneth wants to evenly divide the 24 apples in her basket into 6 smaller baskets. Explain how many apples must be placed in each smaller basket.
