

Unit 6 Overview

Comparisons and Data Formats

UNIT 6 REVIEWS AND BUILDS on children's understanding of comparing numbers. Children are introduced to picture graphs, tables, and calibrated units. Use of these graphic representations helps children see information in a way that makes comparisons clear and visual. Throughout the unit, children discuss relationships such as how many more, how many less, and how two amounts can be made equal. As they articulate the relationships between the various amounts they see, they develop precision in mathematical expression.
