

## Unit D Overview

# Diagonals and Midpoints

UNIT D BEGINS WITH a review of naming quadrilaterals. Children are then introduced to drawing diagonals in quadrilaterals. After discussing types of triangles, children describe the shapes resulting from drawing diagonals in quadrilaterals. Children also explore different ways of finding midpoints of line segments and apply these skills to decomposing quadrilaterals by joining midpoints of their opposite sides. Children describe the resulting shapes in several ways, and compare them to the original quadrilaterals.
