

## Unit F Overview

# Metric Measurement and 3-D Shapes

IN THIS UNIT, children continue to develop their measurement skills and learn to convert between metric units of length. The relationship between the base ten system, the monetary system, and metric system is emphasized. The final two lessons of the unit focus on 3-dimensional figures. Activities include identifying faces, edges, and vertices of rectangular prisms, and sorting 3-D shapes according to attributes. Children continue to develop their spatial sense as they sketch faces of solid figures, build rectangular prisms from nets, draw rectangular prisms from different viewpoints and find volume by counting cubic units.
