

## Unit B Overview

# Figures, Angles, and Triangles

UNIT B REVIEWS CLASSIFYING quadrilaterals and identifying parallel sides and perpendicular sides in figures. Lines of symmetry and congruent figures are introduced. In the activities in this unit, students decompose and compose quadrilaterals and classify triangles according to lengths of sides and measures of angles. Students estimate the measures of angles using benchmark angles, discover that the sum of the angles in a triangle is  $180^\circ$ , and find the measure of a third angle in a triangle given the measure of two other angles.
