

Unit G Overview

Directions and Locations

IN UNIT G, students are introduced to coordinate grids. Students first follow directions, describe routes, and make maps on grids. Next, they use ordered pairs to locate and identify points on coordinate grids. Activities include plotting and joining points to draw rectangles, and completing figures by plotting and naming ordered pairs. In the final activity of the unit, students measure the length of line segments drawn on coordinate grids using the distance between adjacent lines as a unit.
