

## Unit 2 Overview

# Addition and Subtraction With Whole Numbers and Decimals

UNIT 2 DEVELOPS students' concepts of change, collection, and comparison addition and subtraction situations. The activities in this unit help students gain a deeper understanding of place value and of addition and subtraction of whole numbers and decimals, and the relationships involved in these operations on such numbers. Students use their understanding to pose and solve problems in pictographs, bar graphs, and line graphs, and continue to use algebraic notation in situation and solution equations.
