

Unit 3 Overview

Fraction Concepts

UNIT 3 BUILDS on the conceptual understanding of fractions that students have developed in previous grades. Activities help students develop strategies to add and subtract like and unlike fractions, and to work with equivalent fractions. Students use a variety of representations in this unit to help them gain fluency with manipulating proper and improper fractions and mixed numbers. Students are expected to apply their understanding and skills with adding and subtracting fractions to numeric calculations and to real-world, problem-solving situations.
