

## Unit D Overview

# The Coordinate Plane

IN UNIT D, students learn to plot points on a coordinate grid. They also practice translating, reflecting, and rotating figures and describing how they move. Students consolidate and apply their knowledge by translating and reflecting figures on a coordinate grid. When they do so, they describe how the figures change as they are translated or reflected, and how they stay the same. Students review some of the concepts they have learned in this unit by generating ordered pairs from a function and using the ordered pairs to plot the function on a coordinate grid.
