

Dear Family:

We want children to see numbers 6, 7, 8, 9, and 10 as having a 5 and some more. We call this using a 5-group. *This visual pattern will help children add and subtract and understand numbers.* It will also help later in calculations with greater numbers.

The 5-groups can be shown all across or up and down.

Help your child see 5-groups in numbers.

Thank you!

Sincerely,
Your child's teacher
