

# How Things Move

## Steps

1. **Think of ways to make objects move.**  
You might use one object to move another. See if you can make some things move in a curve.
2. **Record Data** On a sheet of paper, write how you moved each object.
3. **Communicate** Talk to others about what you observed.

## Think and Share

1. What made each object move?

**Investigate More!**

**Solve a Problem** Some children want to play marbles. They need a flat surface. How can they use a marble to find the best place to play?
