

# Woodland Model

## Steps

- 1. Use Models** Make a model of a woodland. Put some gravel in the bottom of a cup. Add soil until the cup is half full. **Safety:** Wear goggles!
- 2.** Spray the soil with water. Plant moss or a fern.
- 3.** Put an empty cup on top of the first cup. Tape the cups together.
- 4. Record Data** Put your model in dim light. In the space below, write or draw the changes you see each day.

## Think and Share

1. **Infer** Why do you think a woodland model should be kept in dim light?

---

---

2. **Predict** What changes do you think will happen over time?

---

## Investigate More!

**Experiment** How might bright light affect your woodland model? Make and carry out a plan. Share what you observe.
