

# Predict Change

## Steps

1. Write **Water** on one stick. Write **No Water** on the other stick. Label each cup of grass. Water only the glass labeled **Water**.
2. **Predict** Place the cups on a tray in a sunny window. Tell how you think each cup of grass might change after five days.

---

---

3. Continue to water only the grass labeled **Water** each day for five days. Record your results in the chart below.

	Day 1	Day 2	Day 3	Day 4	Day 5
Grass with water					
Grass with no water					

## Think and Share

1. **Communicate** How did the cups of grass change during the five days?

---

---

---

---

2. **Compare** How did your results compare to your prediction?

---

---

## Investigate More!

**Experiment** Plan a way to find out what happens when a plant gets too much water. Carry out your plan. Share your results with your classmates.
