Compare Matter

Steps

1. Make two trays from foil.

2. Put some butter on one tray. Put a block on the other tray.

3. **Predict** Put the trays under a lamp. Tell what you think will happen after 10 minutes. Then observe. **Safety:** The lamp is hot!

4. **Compare** How did your prediction compare to your results?

Think and Share

1. **Compare** Tell how the changes to the butter and the block were alike and different.
2. **Infer** What do you think caused the changes?

**Investigate More!**

**Experiment** Repeat the activity with other solids. You might use an ice cube and a pencil. What can you infer about solids?
