Seeing Sounds

Procedure

1. Collaborate  Work with a partner. Turn an empty coffee can upside down. Have your partner tap the bottom of the can with the spoon. On the lines below, record what happens. Safety: Wear goggles.

2. Observe  Place a few grains of sand on the bottom of the can. As your partner taps the can with the spoon, use a hand lens to observe the grains of sand. Record your observations on the lines below.

3. Record Data  Hold a metal washer by the edge. Use the spoon to tap the washer. Record your observations on the lines below.

4. Observe  Now tie one end of a string to the washer. Have your partner hold the other end of the string so that the washer hangs. Tap the washer with the spoon. Record your observations on the lines below.
Conclusion

Write the answers to the questions below.

1. Observe What happened to the sand grains in step 2? What do you think caused this?

__________________________________________________________________________

__________________________________________________________________________

2. Compare How did the noise the washer made differ in steps 3 and 4?

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

3. Hypothesize What might explain the difference in the sounds?
