

# How Do Environments Change?

## Cause and Effect

### Cause

1. A fire burns in the forest.
2. There is a drought in the forest.
3. A beaver builds a dam.
4. People build where animals live.

### Effect

1. The fire helps some seeds start to \_\_\_\_\_.
2. \_\_\_\_\_ and animals might die.
3. A \_\_\_\_\_ forms behind the dam and is a home for many animals.
4. Animals may adapt and find food where \_\_\_\_\_ live.
