

# How Does the Moon Move?

## Cause and Effect

### Cause

1. Light from the

\_\_\_\_\_ reflects off one side of the Moon.

2. The Moon

\_\_\_\_\_ in an orbit around Earth.

3. It takes four

\_\_\_\_\_ for the Moon to go around Earth.

### Effect

1. On \_\_\_\_\_, we see only a part of the Moon's lighted side.

2. The Moon looks a little

\_\_\_\_\_ every night.

3. The different shapes are called

\_\_\_\_\_ and they repeat every four weeks.
