

# Vocabulary

**condensation** A gas changes to a liquid.

When a gas cools it clumps together into a liquid. This is condensation. Clouds form because of condensation. Condensation forms on the mirror when you shower.

**evaporation** A liquid changes to a gas.

Evaporation happens faster when liquid heats up. The sun makes water evaporate from lakes, rivers, and oceans. Then the water vapor is part of the air.

**water vapor** Water as a gas.

Water is a liquid, a solid, and a gas. We drink liquid water. Ice is solid water. Water vapor is invisible. It is part of the air.
