

Observing Metamorphic Rocks

Each row lists a pair of rocks: a sedimentary or igneous rock, and a metamorphic rock that formed from it.

Tell how the rocks in each row are alike and different by filling in the table.

Use the magnifier to observe the rocks. Describe how they look and feel. Then describe how the rocks were formed. Be sure to write in every box.

Sedimentary Rock or Igneous Rock	Both Rocks	Metamorphic Rock
Granite		Gneiss
Limestone		Marble
Shale		Slate
