

Circumpolar Star Map

STUDENT RESOURCE 6.3
INFORMATION SHEET

- 1 Take this star map outside on a dark, clear night. Hold it overhead.
- 2 Look for the Big Dipper. Then find Polaris, the North Star. It is the last star in the handle of the Little Dipper.
- 3 Turn this chart around so that the Little Dipper and the Big Dipper appear the same on the chart as they do in the sky. Use this map to find the other constellations in the sky.
