

Observing Constellations

- 1 Go outside at night with an adult. Write the time and date for the first box.
- 2 In the sky, find a constellation from the *Circumpolar Star Map*. At the bottom of the box, draw the horizon below the constellation (buildings, trees, or other objects). Then draw the constellation as it looks in the sky. Write its name.
- 3 Return to the same spot two hours later. Draw the same horizon and constellation in the second box.
