

Do Plants Carry Out Photosynthesis in the Dark?

Predict what will happen in light and in the dark.

Measure the height of any gas bubbles you observe in the test tube or jar after 5 days in light. Measure the height of any gas bubbles you observe in the test tube or jar after 5 days in the dark. Record the height of each bubble. Then draw all the bubbles on the diagrams. Draw the bubbles on the kind of containers you used in your aquarium—a test tube, a jar, or both.
