

Graphing Magnet Strength

Use your data from the *Comparing Magnet Strength* Student Resource to make your bar graph.

- ➊ Add the missing numbers to the scale on the left. Label the scale: *Number of Paper Clips Picked Up*.
- ➋ List the magnets you tested on the lines across the bottom. *Bar Magnet* is done for you.
- ➌ Using the *Average* data, decide how tall to make the *Bar Magnet* bar. Draw a line across the column to mark this height. Shade the column up to the line.
- ➍ Repeat Step 3 for the other magnets tested.
