Dear Family,

Our math class will be spending the next few weeks learning about adding two-digit numbers, including adding using regrouping, and using different methods of adding two-digit numbers, including mental addition, paper and pencil calculations, estimating, and using a calculator. Later in this unit, children will learn to use Guess and Check to solve word problems.

As we learn about regrouping, you may wish to use the following sample as a guide.

Add 17 and 25

Step 1
Show 17 and 25 with blocks. Add 7 ones and 5 ones.

Step 2
Regroup 10 ones as 1 ten.

Step 3
Add the tens.

You can help your children practice two-digit addition at home by providing examples of addition for children. For example, students may practice adding coin amounts or items such as stamps or pencils and pens.

Sincerely,

Your Child’s Teacher
