Make A Line Graph

The graph shows the amount of money classes have had to raise in past years for a school trip. Use the line graph to solve Problems 1–6.

1. What was the cost of the class trip in 2002?

2. In what year was the cost of the class trip $350?

3. How much did the cost of the trip increase from 2000 to 2001?

4. Between which two years was the greatest cost increase?

5. Describe the pattern of the cost increase.

6. Using the pattern, predict how much the trip cost in 2006.
