Travel by the Ton

Do research to find the weight in tons of five kinds of vehicles. Record your findings in the table, then multiply to find the weight of each vehicle in pounds.

<table>
<thead>
<tr>
<th>VEHICLE</th>
<th>WEIGHT IN POUNDS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Use the table to answer the questions.

1. Find the weights of the heaviest and lightest vehicles in your table. Estimate how many times more than the lightest vehicle the heaviest vehicle weighs.

2. The mass of the International Space Station is about 520 tons or 1,040,000 pounds. Estimate how many times more than the heaviest vehicle the Space Station weighs.

3. If the mass of a vehicle is \(\frac{1}{10}\) as many pounds as the International Space Station, how many pounds does it weigh?

Use the table to answer the questions.

1. Find the weights of the heaviest and lightest vehicles in your table. Estimate how many times more than the lightest vehicle the heaviest vehicle weighs.

   **Answers will vary.**

2. The mass of the International Space Station is about 520 tons or 1,040,000 pounds. Estimate how many times more than the heaviest vehicle the Space Station weighs.

   **Answers will vary.**

3. If the mass of a vehicle is $\frac{1}{10}$ as many pounds as the International Space Station, how many pounds does it weigh?

   *104,000 pounds*
