Problem-Solving Decision: Choose the Operation

Solve. Tell which operation you used.

1. A one-day pass at an amusement park costs $10. How much would you pay for passes for yourself and a friend?

   __________________________________________________________________________

2. Twelve students are on a roller coaster. Two students are in each car. How many cars are on the roller coaster?

   __________________________________________________________________________

3. Three hundred twenty-four students came to an amusement park on Friday. Five hundred seventeen students came on Saturday. What is the total number of students who came to the park on Friday and Saturday?

   __________________________________________________________________________

4. Jenna rode the merry-go-round 4 times. Each ride lasted 2 minutes. How many minutes did Jenna ride the merry-go-round in all?

   __________________________________________________________________________

5. Thirty-seven students were on the Ferris wheel. Eighteen students stayed on for another ride. How many students got off the Ferris wheel?

   __________________________________________________________________________
