Problem-Solving Application: Decide How to Write the Quotient

1. Ms. Brown’s class is going to Orlando, Florida, for a class trip. It costs $4,818 to send 24 students. How much does it cost per student?

   What is the question?
   ____________________________________________________________

   What do you know?
   ____________________________________________________________

   What operation do you need to use?
   ____________________________________________________________

   Will you write the quotient as a fraction or as a decimal?
   ____________________________________________________________

   What is the solution to the problem?
   ____________________________________________________________

   How can you check your answer? Decide how to write the quotient to solve the problem.
   ____________________________________________________________

2. The class made 2 trips to a water park. If they spent 9 hours total at the water park, how many hours did they spend per trip?

   ____________________________________________________________
