Meeting Individual Needs

Step-by-Step
Find and photocopy pictures that illustrate the following steps in planting: placing soil in a cup; placing seeds in the cup; covering the seeds with soil; watering the soil; placing the cup in a sunny location. Before showing students the pictures, discuss this process with them. Then give each student copies of all five pictures, in random order. Provide poster paper and have students glue the illustrations in the correct order. Tell students to leave some space before the first picture. Discuss what would happen if the steps were not done in the correct order.

Finally, have each student make a picture to add to the beginning of the process, drawing and labeling the materials used (pot, soil, seeds, water).

Challenge

There’s No Business Like Show Business
Have students work in small groups. Have each group create a multimedia presentation showing how to take care of a pet. Tell students to use video and audio. Have each group present its instructions to the class.
