Make a Stream

Steps

1. **Use Models** Use clay to make a stream in a pan. Then make the banks of the stream with more clay.

2. Put rocks and pebbles in the bottom of the stream.

3. **Observe** Pour water in one end of the stream. Watch the water flow.

4. Write about what happened.

__________________________________________________________________________
Think and Share

1. **Communicate** Tell a classmate about the nonliving parts of the stream.

2. **Infer** How might living things meet their needs in a stream habitat?

---

**Experiment**

Plan ways to change how the water moves in your model. **Observe** what happens each time.
